

AIRFIELD

SAFETY, MARKINGS, AND REHABILITATION PRODUCTS

Transpo is a leading manufacturer of high-performance products designed to enhance the durability and safety of transportation infrastructure. With decades of expertise in road safety, bridge preservation, and airfield solutions, Transpo delivers reliable, engineered products that improve airfield safety and meet the evolving demands of the transportation industry.

Jet-Blast Barrier System

Transpo Blast-Safe® Jet-Blast Barrier system provides positive protection for pedestrians, ground vehicles and other airport facilities that may be subjected to jet-blast hazards from nearby runways, taxiways and tarmacs.

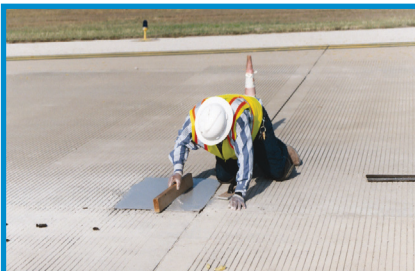

Frangible Fuse Bolts

Transpo Pole-Safe® Frangible Fuse Bolt System features frangible anchor bolt/base plate connections designed to be used with objects such as navigational or visual aids, placed within the designated safety area that are required by the FAA and ICAO to be mounted on frangible supports.

MMA Pavement Markings

Transpo Color-Safe® Airfield Markings produce the most durable, high-definition color airfield markings on the market today. Color-Safe is easy to use, has excellent color retention, and will strongly adhere to asphalt and concrete surfaces.

Polymer Concrete

Transpo T-17 Polymer Concrete is a pre-packaged, two component, 100% reactive material system. T-17 is easy to handle in all working conditions and requires no special equipment. Unlike cementitious based materials, T-17 cures in less than one hour, assuring a quick return to service.

Airport Concrete Crack Sealers

Transpo offers Concrete Crack Sealers for Airports that are specially formulated HMWM and MMA resin materials that strengthen and extend the life of concrete structures. Our crack sealers can be used in airport runways, taxiways, aprons and other various concrete structures.
