

Transpo Industries manufactures high-performance products designed to improve airfield safety and runway rehabilitation. With decades of expertise in the transportation industry, Transpo is committed to providing reliable, engineered solutions that address evolving infrastructure needs and enhance airfield safety.

# Concrete Sealers

## AIRPORT STRUCTURES AND RUNWAYS

### Concrete Crack Sealers

Transpo offers high-performance Concrete Crack Sealers designed to seal and fill cracks and pores in concrete surfaces and structures. Our advanced formula penetrates deeply into cracks, quickly bonding and sealing while reducing chloride permeability to protect against further deterioration. Ideal for use on cracks, spalling, joints, and other forms of concrete wear including:

- Runways
- Aircraft Hangars
- Parking Garages and Decks
- Premature cracking in new concrete

Easy to apply, our sealers require minimal labor and no specialized equipment, while playing a crucial role in maintaining the structural integrity and safety of an airport's concrete structures.

Transpo sealers are easy to handle in all working conditions, while their rapid cure times assure a quick return to service.

**SAFER TRANSPORTATION THROUGH INNOVATION**

# Concrete Crack Sealers

## AIRPORT STRUCTURES AND RUNWAYS

### Features and Advantages

- Very Low Viscosity
- Deep Crack Penetration
- Fills and Bonds Cracks
- Easy Single Application
- Requires No Special Equipment
- Strengthens and Extends the Life of Concrete

The very low viscosity and surface tension allow our sealers to easily penetrate and fill deep cracks in existing concrete. The significantly lower modulus and increased tensile elongation provides better compatibility with moving cracks and thermal stresses.

Transpo Concrete Sealers are available in different formulations to meet various project specifications and requirements, including:

- **T-70 HMWM** - Lower modulus and increased tensile elongation provides compatibility with moving cracks and thermal stresses.
- **T-78 MMA** - Very low viscosity and surface tension results in deep penetration into cracks at temperatures as low as 40° F.
- **T-70 Vertical** - While staying suspended on vertical applications has been shown to have crack penetrating capabilities of over one inch.

Formulations are available for horizontal, injection, vertical and overhead applications.
