T-18 MMA

THIN OVERLAY SYSTEM

Fast Curing Thin Overlay

T-18 methyl methacrylate (MMA) polymer concrete is a fast-curing, thin, slurry overlay. It is a pre-packaged system ideal for concrete and steel bridge decks. T-18 is comprised of a blended powder filler that forms a slurry when mixed with the polymer resin. Aggregate is broadcast into the slurry to form a wearing coarse before opening to traffic.

T-18 is designed to be applied at 3/8" thickness which eliminates the need to relocate joints, end dams or drain structures. Installation of T-18 will add less than three to four pounds of dead load per square foot of surface area which is an important consideration for rehabilitation of older structures.

The short cure time of the system assures a minimum downtime and a quick restoration of service. The broadcast aggregate provides a highly durable, skid resistant surface that can be used for vehicular and pedestrian applications.

T-18 reduces downtime with rapid cure.

SAFER TRANSPORTATION THROUGH INNOVATION

T-18 MMA

THIN OVERLAY SYSTEM

Features and Advantages

- Fast Cure (Approximately one hour)
- Wide Application Temperature Range (14° - 90°F)
- Easy Application
- Skid Resistant
- High Early Bond Strength
- High Elasticity
- Chemical Resistant
- Waterproof
- Steel and Concrete Compatible

Applications

Transpo T-18 overlay can be used as a wearing surface on various types of structures:

- Concrete Bridge Decks
- Steel Orthotropic Bridge Decks
- Parking Garages
- Ramps and Sidewalks

T-18 is applied using a single application slurry method. It is easy to handle and does not require any specialized installation equipment.
